

We recommend that you use 'Maxwax' when the timber loses its "glow" and appears dull.

Maxwax is a unique blend of food grade waxes taken up in a mild non-aromatic solvent. The formulation is specifically designed to penetrate porous surfaces (such as wood), whilst leaving a thin wax film on the surface. This not only nourishes the wood like an oil, but also leaves a wax luster to the surface which can be buffed up to a healthy sheen.

Furniture in hot or sunny environments or in extremes of temperature or humidity will require more care.

We recommend that you do not use furniture polishes that contain Silicone as contamination may occur resulting in difficult repair methods.

By adhering to these recommendations the durability of the finish of your furniture will be enhanced.

FURNITURE CARE GUIDE

For Leather, PU, Waxed/Oiled/Lacquered Timber, Painted Fibreboard, Foil Veneer, Sleep sets and Mattress Care.

LACQUERED OILED AND/OR WAXED TIMBER FURNITURE

To maintain your furniture in its original new condition we recommend that you keep to the following simple rules:

- Use heat resistant place mats for hot beverages and food. (Lacquers are not heatproof).
- If you can hold it in your hand it's safe to put on the lacquered surface.
- We recommend that you use place mats/coasters for oil and wax surfaces.
- Mop up any spills with a damp cloth as soon as practical to prevent possible impairment of the finish.
- Dust with a damp soft cloth. Regular application of a wax polish will seal any small splits and damage, and help guard against moisture penetration.
- If your timber surface has light scratches on it, we recommend the use of a **Touch Up Pen** and/or **Maxwax** to disguise the scratch.
- For major damage, please consult a furniture restoration specialist.
- Fluctuating temperatures can stress timber furniture and cause splitting.
- If you have a humid environment check for mould from time to time and clean off to avoid the spores from

CLEANING:

PLEASE NOTE:
We recommend professional cleaning for heavy soiling

FELT FEET

Heavy duty, self adhesive and available in many shapes and sizes to help protect your wooden floors.

PAINTED FIBERBOARD AND FOIL VENEER FURNITURE

- Mop up liquid spills as soon as they occur as joins and unsealed ends are ideal spots for water to be absorbed into the timber which leads to delamination of the paint and foil veneer.
- The surface may be wiped with clean soapy water or proprietary cleaners such as 'Handy Andy' or 'Multi' can be used, however do not leave concentrated amounts of these cleaners on the surface for extended periods. Abrasive cleaners are not recommended as these will wear into the surface and leave a mark.
- Don't use strong solvents. Methylated spirits may be used with discretion, however, as a general rule it is best to assume solvents and painted or foil veneer surfaces do not mix.
- Don't use sharp objects on the surface. As the paint or foil veneer is only a thin film of resin over the fibreboard, your furniture is not intended to withstand use as a craft cutting board!
- Follow Your Manufacturer's Care Label instructions for your valuable Leather or PU furnishings.
- To Avoid Fading and Cracking Keep out of Direct sunlight.
- Always attend to spots, liquid spills and marks as soon as they occur. *With a clean tissue or soft cloth absorb as much of the spill as possible, then gently pat with a clean cloth or tissue.
- **DO NOT** rub.
- If the mark persists dab with a damp cloth as a follow up. *If the mark still remains use a Leather Cleaner. Ensuring to follow the directions carefully and always do a pre-test on an inconspicuous area.
- For Leather, periodically use a Leather Nourisher to maintain the appearance and rejuvenate the appearance and softness.
- Read instructions carefully of any product used.

LEATHER AND PU CARE

SLEEPSET AND MATTRESS CARE

These are basic guidelines to the care and well being of your new bed or mattress, which if followed will enhance the life and quality of your new bed or mattress. To see further instructions, please visit our website www.furnituretree.co.nz

DO:

- Do rotate your mattress frequently, every 2 weeks in the first three months and every 2 months thereafter.

1 Rotate the mattress on top of your base

2 Realign the mattress with the base of your base

- Do carry your mattress flat.
- Do ensure that your bedroom and bed are regularly aired.
- Do keep your bedding clean, we recommend the use of a mattress protector.

DON'T:

- Don't bend the mattress.
- Don't allow anyone to jump on the bed.

FABRIC CARE:

- Do protect from direct sunlight.
- Do vacuum regularly using low suction.
- Do treat spills and stains as soon as possible by patting with a damp cloth.
- Don't saturate fabric with water or cleaning liquid.
- Don't use dishwashing or laundry detergent.
- Don't scrub with a stiff brush.

MATTRESS PROTECTORS:

We recommend mattress protectors to help prolong the life of your mattress.

Sophie Steen has a **5 year guarantee** on their fitted sheet style protectors. Available in Single, King Single, Double, Queen, King, Super King. Constructed from terry fabric, 100% water proof, machine washable, anti-allergenic, and an anti microbial dust mite barrier.
